

An international healthcare company needed to unitize 2 cans of sun tan lotion at 60 packs per minute.

CHALLENGE:

Graphics must be oriented precisely

CHALLENGE:

Aerosols can explode if exposed to excessive heat. Special equipment is required to maintain safety

CHALLENGE:

Shrink must be distortion free

CHALLENGE:

The twin pack shrink must be strong enough to keep the 2 containers stable and together

SOLUTION:

- **PDC's R-250-TS-ER Multipacker**
- **PDC's RAD/KRC Series Hot Air Tunnel** for precise control of temperatures and distortion free shrink
- **Zero Downtime Accumulator Unwind** allows for continuous operation during splices, eliminating downtime
- **Tunnel In/Out Sensors with Conveyor Encoder** – tracks and counts every can entering the shrink tunnel. If a fallen container is detected, the Power/Auto Lift Tunnel Stand (with Battery Backup) lifts the tunnel clear of the conveyor and aerosol cans.

R-250-TS-ER Multipacker
